Cesare Bonetti centenary celebrations

Cesare Bonetti SpA is celebrating one hundred years from its foundation and thanks its partners and customers who have helped it reach this important milestone. Formed in 1905 in Milan as a small engineering workshop, the company was recognised as early as the 1920s as being among the main producers of valves and level indicators nationwide. The subsequent growth in the range and highly-esteemed quality of its products, combined with the continuous expansion of its markets are today transformed into the reality of the Garbagnate Milanese factories (occupying 25,000 m² out of a 66,000 m² area) where more than 150 people operate, in addition to its factories in Limburg an der Lahn (Germany), those in Suzhou (People's Republic of China), as well as a joint-production venture in Istanbul (Turkey) and its current commercial network of distributors and agents that cover more than eighty countries.

Its fervent research and development activities in search of new products, many protected by scores of world-wide patents, launches Cesare Bonetti SpA into the future. Thus, developed in close co-operation with associated companies, systems of automation and remote control through special tel-

evision cameras have been devised that have recently been implemented on the locks of the Naviglio Canal of Milan, whereas new electronic systems for level-control and level-measurement based on laser technology are currently being developed and experimented as a result of collaboration with University Research Centres. Nowadays Cesare Bonetti's product range covers forged and cast steel valves (globe, gate, check, ball, piston, blow down), level gauges (glass and magnetic type) and related remote signal transmission systems, compact manifolds for steam distribution, strainers for piping, electronic systems for fluid remote control and automation (video cameras).

Today, as in the past, the real patrimony of the company is represented by the high professional competencies of its resources which, as they continue in the tradition of a process of constant renewal, represent the vital factor that epitomizes the Company's modern outlook, by always guaranteeing knowledge, technological innovation and competency in design, all of which are directed towards serving and satisfying its customers.
